ExpertSec Vulnerability Finder Main Features:

- Scan several servers with the script
- Scan against a local server or a remote server.
- Use the program against a local server or a remote server.
- Protect you from online attacks
- Automatically block file extensions
- Find weak points using several tools
- Use your own scripts
- Automatically save scan reports
- Use the program against a local server or a remote server
- Protect your system from remote or internal attack
- Find weak points using several tools
- Use your own scripts
- Automatically save scan reports
- Use the program against a local server or a remote server
- Protect your system from remote or internal attack

ExpertSec Vulnerability Finder FAQ: Q: Can you scan an infected system? A: Yes, you can use the program to scan infected systems. In this

What's New in the ExpertSec Vulnerability Finder?

ExpertSec Vulnerability Finder is a simple Command Line utility that lets you scan your network using a specified type of scan. This may be performed on any target for which an appropriate Security Protocol (ICMP, SSH, etc...) can be established. This utility works with any platform that has the ability to run Linux scripts in it. Some examples are Windows, Linux, Mac OS X, FreeBSD and even (IIRC) Z-OS! The tool runs on top of the open source Nessus... [More]

MySQLDump is a MySQL client to dump all databases on your MySQL server and pull them into a MySQL file. With only a few simple key strokes, you can have all your databases dump into a file.

MySQLDump Description: MySQLDump allows you to dump and restore your MySQL databases in .frm, .ibd, .myd and .myi files. MySQLDump does this by extracting data from each file and combining them into a file containing all the databases.

MySQLDump is a MySQL client to dump all databases on your MySQL server and pull them into a MySQL file. With only a few simple key strokes, you can have all your databases dump into a file.

MySQLDump Description: MySQLDump allows you to dump and restore your MySQL databases in .frm, .ibd, .myd and .myi files. MySQLDump does this by extracting data from each file and combining them into a file containing all the databases.

LHELIVE is a set of tools that allows you to share your Internet connection with other computers.

LHELIVE Description: LHELIVE stands for 'Live Help en Communicatie'. It is a set of tools that allows you to share your Internet connection with other computers. This works by identifying your computer as 'available' and creating a network link that can be used by computers on your network. LHELIVE has two parts: the software (LHELIVE) and the service itself. LHELIVE is a CLI tool that lets you do exactly the same thing as LHELIVE would do with a GUI.

Macintosh Calculator is a calculator designed to meet the needs of the Macintosh user. It uses specialized commands and works with one, two or three
